

ResMed F30 Full Face Mask

Introducing ResMed AirFit™ F30 – The ultra-compact mask that delivers full-face functionality in a design you will appreciate. Smaller, quieter and less obtrusive than a traditional mask, its under-the-nose design can help to make therapy less challenging by increasing visual and physical freedom. Issues with discomfort and facial markings on the nasal bridge may now be things of the past.

Minimal contact redefined. The under-the-nose design of the AirFit F30 aims to eliminate pressure, discomfort, and facial markings on the nasal bridge. The quick-release elbow is easy to connect and disconnect if patients need to get up during the night, and the 360° rotation and tilting at the elbow helps to reduce tube drag, whilst offering greater freedom of movement during sleep.

More peaceful sleep The AirFit F30 features the same innovative QuietAir vent as the AirFit F20, gently diffusing exhaled air to minimize noise, helping to facilitate a more peaceful sleep for patients and their bed partner. The magnetic clips are a great option as it prevents difficulty with putting mask on and off.

Streamlined operations You can achieve fast and efficient fitting with just one frame, one headgear and two cushion sizes. Designed for an accurate first-time fit it can help to reduce difficulty with refits.

This mask has only 2 sizes

- AirFit F30: Small 64126
- AirFit F30: Medium 64127
