

Fisher and Paykel Eson 2 Nasal Mask

The Eson 2 continues on from the success which Fisher and Paykel Healthcare have had with their previous Eson nasal mask. There have been over 20 design improvements compared to the previous Eson nasal mask. The Eson 2 was designed to meet the needs of patients at every important milestone in the CPAP therapy journey. The parts for Eson 1 are not compatible to be used with Eson 2 due to different connections.

The Easy frame which fits all 3 sizes has a narrow profile which provides a clear line of sight whilst retaining stability

The RollFit seal is designed to deliver a precise fit and effective seal by automatically adjusting at the bridge of the nose.

The new intuitive headgear is made of high quality materials and allows for patients to stretch the headgear directly over the head

The new washable diffuser follows on from the success of the diffuser on their previous Eson nasal mask. this reduces the noise form the mask and also prevents the air affecting their partner at night. the washable filter lasts a lot longer then the disposable diffuser on the previous Eson mask.

The new VisiBlue tinting incorporated into the key mask components makes it easier for mask orientation disassembly and reassembly

Sizes – Small, Medium, Large
