

Fisher and Paykel Vitera CPAP Full Face Mask

Comfort is unique, personal and it is the key to successful CPAP therapy¹. That is why we believe comfort needs to be measured across a full night's sleep, not just during the initial consultation.

With technologies that work together to provide breathability, adaptability and stability throughout the night, F&P Vitera is a mask that redefines comfort.

Keep cool and comfortable with VentiCool. Sweating during sleep is a well-known symptom of patients with Obstructive Sleep Apnea. Vitera headgear features proprietary breathable fabric that allows 21 times more air flow and 35% more moisture transfer than the material used in our leading range of full face masks. VentiCool technology helps to keep patients cool and comfortable during sleep.

The RollFit XT seal allows the mask to dynamically adapt as patients move during the night, keeping the seal in place, as well as reducing pressure on the bridge of the nose. The RollFit XT seal extends 93% further than the previous generation RollFit seal. The RollFit XT seal shape has also been designed to fit a wide range of face shapes and minimize leaks into the eyes.

Fisher and Paykel Healthcare ran their internal trials and found the following results:

- 93% of patients rated the Vitera as equally or more stable than their usual mask
- 88% of patients could sleep in their preferred sleep position throughout the night
- 90% of patients rated the Vitera as equally or more comfortable on the face compared to their usual mask

The Vitera comes in 3 sizes of small, medium and large.
